ABOUT

Full-stack developer who learns by building real-world systems using the MERN stack, Python, and AWS. Comfortable designing APIs, working with databases, and thinking through system decisions before implementation. Uses AI as a tool while owning the architecture and tradeoffs behind every feature built. Takes responsibility for delivering solutions end-to-end across AI-powered and cloud-based projects.

EDUCATION

Prasad V. Potluri Siddhartha Institute of Technology <i>Bachelor of Technology in Computer Science and Engineering, CGPA: 8.75 / 10.0</i>	Vijayawada 2024 – Present
Dr. B. R. A. G. M. R. Polytechnic <i>Diploma in Computer Engineering, CGPA: 9.1 / 10.0</i>	Rajahmundry 2021 – 2024
Sri Rama Rural Sainik School <i>Board of Secondary Education, CGPA: 10.0 / 10.0</i>	Chilumuru 2021

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, Java, SQL
Backend: Node.js, Express.js, FastAPI, REST APIs, JWT Auth, WebSocket, Rate Limiting
Frontend: React.js, Tailwind CSS, Framer Motion, Recharts
AI & Cloud: Amazon Bedrock, Groq LPU , RAG Pipelines, MongoDB Atlas Vector Search, AWS (EC2, S3, SQS FIFO, Lambda, API Gateway), Boto3
Databases: MongoDB Atlas, MySQL, Supabase
DevOps & Tools: Docker, GitHub Actions, Git, Postman, Vercel, Render, Netlify

PROJECTS

AtlasMind — Conversational BI Platform for MongoDB <i>React 19, Node.js, Express, MongoDB Atlas, Groq LPU, Docker GitHub Live</i>	2025
- Built a conversational BI tool that converts natural language and voice queries into MongoDB aggregation pipelines, achieving sub-200ms query generation latency. - Set up a multi-stage AI pipeline where each stage handles a specific failure mode — from schema context injection to query safety validation before execution. - Added a query safety layer that blocks destructive operations by default and requires explicit user approval — the tradeoff between usability and data protection shaped how the entire query flow was built. - Built auto-visualization that picks the right chart type based on result shape; users can pin any result as a live dashboard widget that refreshes on demand. - Containerized with Docker, automated CI/CD via GitHub Actions. Stack: React 19, Node.js, Express, Groq Llama 3.3 70B, MongoDB Atlas, Tailwind CSS, Recharts.	
Omni — AI-Powered Incident Response Platform <i>Python, FastAPI, React, Amazon Bedrock, SQS FIFO, MongoDB Atlas GitHub</i>	2025
- Built an incident response platform that detects production crashes, classifies severity, and triggers automated fixes — all within <5s end-to-end (p95). Built for the Amazon Nova Hackathon (Agentic AI category). - Used SQS FIFO over standard queues to solve a specific problem that shows up when the same crash arrives from multiple services at once. - Integrated a RAG pipeline over past incidents so the system gets better at triage the more it is used — picking the right embedding model and chunk strategy was a key decision. - Added a log sanitization step before any data reaches the AI model — it was the first thing built and the last thing that would be removed. - Achieved 92% classification accuracy on crash logs at <\$0.50 per incident. Live results stream to a React dashboard in real time. Stack: Python, FastAPI, Amazon Bedrock (Nova 2), MongoDB Atlas Vector Search.	

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02)	AWS	2026
Machine Learning Foundations	Infosys Springboard	2025
Cisco Networking (CCNA)	Cisco	2025
Full Stack Developer Certificate	EduSkills	2024
Amazon Cloud Foundations	AWS Academy	2024
